

E-Z FLEX[®] STS

STABILITY & RIDE CONTROL

ENGINEERED FOR STRENGTH & STABILITY

TRUSTED STABILITY. LASTING COMFORT. PROVEN DURABILITY.

- » Reinforced cross member and heavy-duty shocks work together to cut bounce, sway, and frame stress.
- » Premium components and easy bolt-on installation deliver a safer, smoother ride while protecting your RV and everything inside.

dextergroup.com

SMOOTH. STABLE. STRONG.

» THE DIFFERENCE FOR EVERY MILE

Integrated Stability Cross Member

- Reinforces structure between axles.
- Reduces lateral flex and frame distortion under load.

Heavy-Duty Shock Absorbers

- Tuned specifically for RV trailer dynamics.
- Minimizes bounce, sway, and road vibration.

Durable Construction

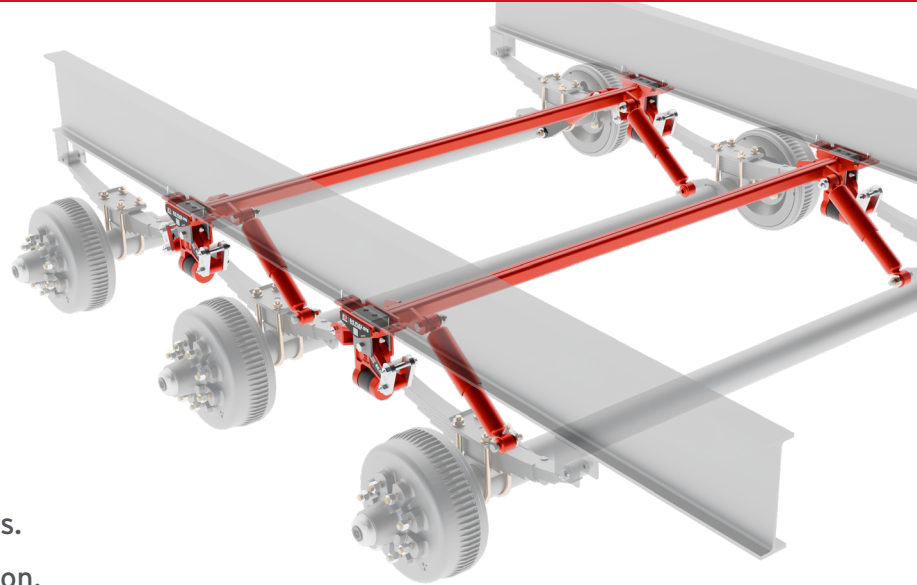

- High-strength steel cross member with corrosion-resistant finish.
- Shock components tested for long service life.

Improved Towing Stability

- Minimizes wobble for safer highway driving.
- Reduces driver fatigue by improving control.

Extended RV & Component Life

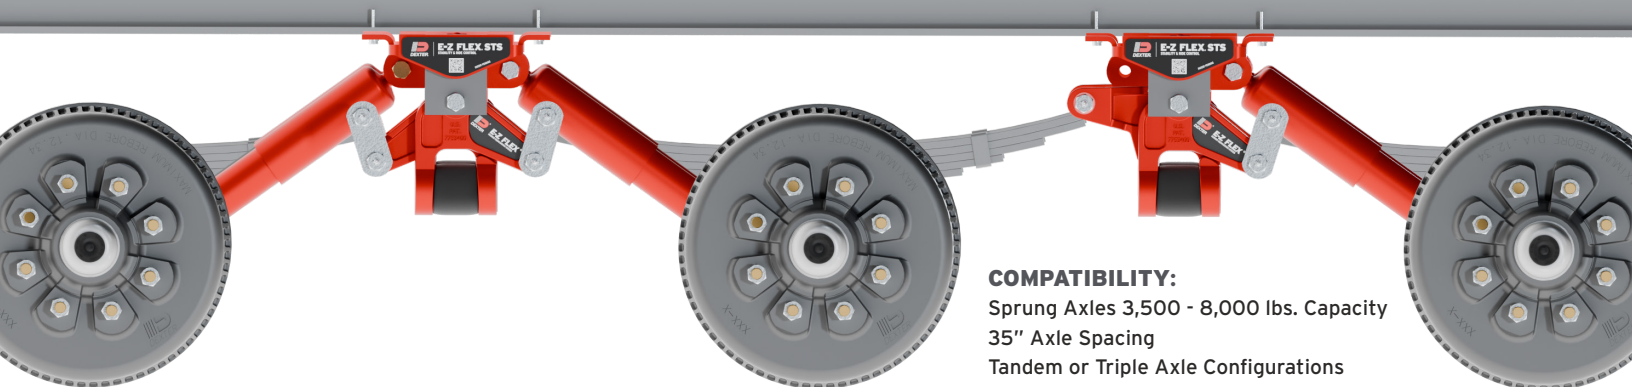

- Less vibration means less wear on tires, axles, and suspension components.
- Protects interior finishes, electronics, and structural joints.

» BUILT FOR A SMOOTHER, SAFER RIDE

Dramatically reduces trailer rebound and “chucking” on rough roads, helping keep cabinets, furniture, and belongings more secure.
